Summary

Full-stack SDE with two internships, building REST APIs, secure authentication, and React interfaces using Java, JavaScript, Node.js, Express.js, MongoDB, and SQL. Built an idempotent banking backend and a full-stack AI interview-prep platform.

Education

Vellore Institute of Technology, Vellore | B.Tech in Computer Science and Engineering | CGPA: 8.02 2026
DPS MIS, Doha, Qatar 2022

Skills

Languages: Java, JavaScript, SQL, Python, Go
Backend: Node.js, Express.js, REST APIs, JWT, Authentication, Rate Limiting, MVC, Zod
Frontend & Databases: React.js, JavaScript, HTML5, CSS3, MongoDB, SQL (relational)
AI, Cloud & Tools: Google Gemini API, AWS (S3, EC2), Git, GitHub Actions, CI/CD, Agile, Postman, Vercel, Render
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, SDLC

Work Experience

Software Engineer Intern — NepByte Technologies Nov 2025 – Mar 2026

- Built backend of a fabric-condition analysis system recommending wash cycles by material and wear level (Python).
- Developed 14 REST API endpoints (CRUD, auth, analysis, recommendations) in Node.js, Express.js, MongoDB, and SQL.
- Tuned API performance, cutting response time by about 100 ms via database indexing and asynchronous processing.
- Debugged 12+ issues (auth flaws, repeated DB runs, wasted resources); ran tests, build, deploy via GitHub Actions CI/CD.

MERN Stack Developer Intern — Ethnus May 2025 – Jul 2025

- Delivered 5 modules in 6 Agile sprints, cutting post-review rework by 20%, via modular MERN-stack development.
- Cut recurring bug reports by 25% with backend validation that blocked unauthenticated and unauthorized requests, invalid tokens, and expired sessions, plus Git code reviews across 15+ pull requests.
- Integrated 8+ React interfaces with REST APIs in an Agile team.

Projects

Interview Practice AI – AI-Powered Interview Preparation Aug 2026
React, Node.js, Express.js, MongoDB, Gemini API, Zod | GitHub

- Developed and deployed a full-stack React/Node.js platform that analyzes resumes against job descriptions to generate interview reports, cutting manual prep time by about 40% across 43 test scenarios.
- Built 8 REST endpoints for PDF parsing, AI orchestration, and report persistence in a controller-service backend.
- Enforced Zod validation across 6+ Gemini response fields, reducing invalid AI-response errors by 30%.

Asjad Bank – Secure Banking System Backend Sep 2026
Node.js, Express.js, MongoDB, Mongoose, JWT | GitHub

- Engineered a ledger-based banking backend that records every balance change; fund transfers run atomically in MongoDB transactions (sessions) with idempotency keys to prevent duplicate debits.
- Verified correctness with unit, idempotency, and concurrency tests; added rate limiting to protect endpoints.
- Implemented JWT auth, OTP email verification, password hashing, token blacklisting, role-based access control, and email alerts.

Sachi – Assistive Sound Recognition | *Patent Published* Aug 2025 – Nov 2025
Flutter, TensorFlow Lite, Python, CNN | GitHub

- Built an AI-powered assistive app for hearing-impaired users, classifying environmental sounds with 87% accuracy and sub-50 ms inference latency using an on-device TensorFlow Lite CNN model trained on a custom, self-recorded dataset.
- Enabled offline use through visual and vibration alerts across 5 sound categories, with no internet dependence.

Certifications

Oracle Generative AI Professional • Oracle SQL HeatWave Associate • Microsoft Power BI Data Analytics • Cisco Cybersecurity
